## Education

<b>Bachelor of Technology in Computer Engineering</b> <i>Shankersinh Vaghela Bapu Institute of Technology</i> CGPA-7.32/10 Related Coursework: Java, Object-oriented programming, DBMS, Data Structures and Algorithms, Software Engineering	August 2016 – August 2020 <i>Ahmedabad, Gujarat</i>
<b>Krishna School of science</b> Related Coursework: Physics, chemistry, Maths	August 2016 – August 2020

## Technical Skills

<b>Programming Languages</b>	: Kotlin, Java, C++, PHP
<b>Android Development</b>	: Navigation components, RestApi, Architecture patterns, Material design
<b>Databases</b>	: Firebase database ,Phpmyadmin ,MySQL,Sqlite,Room
<b>Libraries and Tools</b>	: Retrofit, Git, Postman, frontend lib.

## Experience

<b>Software developer trainee</b> <i>Tops technology. Inc</i> <ul style="list-style-type: none"><li>Developed full Stack mobile native application</li><li>Designed and developed a wide range of applications using and deployed it on Google Playstore</li><li></li><li>Refactored the code to make certain functions and database queries generic.</li></ul>	April 2022 – Present <i>Ahmedabad, Gujarat, India</i>

## Projects

<b>Digital society</b>   <i>Kotlin,Retrofit,Php,pHPMyAdmin,MySql, Material design</i> <a href="#">±</a> <ul style="list-style-type: none"><li>Designed and develop an app using android SDK or people living in a Society facilitating individuals with, Member and Admin roles. Deployed Application on Google play store and stored society data on an online database(000webhost)</li><li>Implemented functionalities for viewing notices, writing complaints, adding new members(admin only), real-time visitor details, and many more.</li><li>Integrated Retrofit dependency simplifies the development process, improves performance, and reduces latency. Implemented material design to achieve good design and a reliable user interface.</li></ul>
<b>Snap Events</b>   <i>Kotlin, Firebase database, SQLite, Php, MySQL, Retrofit, Material design</i> <a href="#">±</a> <ul style="list-style-type: none"><li>Event Management System where students can login to book slots for upcoming events and these events for students are added by the admin of different universities.</li><li>Implemented functionalities to get accurate location of all events taking place using Google maps with custom markers and used android navigation components to execute fragment-based development and increased the performance, Firebase database acts as a major backend service and provides some unique functionality.</li><li>Also added a shop feature, on any purchase data obtained is saved in MySql database(000webhost), developed some micro animation and used frontend library to improve the user interface.</li><li>This influenced us to go <b>100%</b> paperless and users get contest updates on time by getting reminders and scheduling events remotely. Integrated Authentication with Google for login and Sign-up with email verification.</li></ul>
<b>Crypto-Tracker</b>   <i>Java, kotlin, volley lib. , Room database</i> <a href="#">±</a> <ul style="list-style-type: none"><li>Retrieved data from API to get real-time data on cryptocurrency in the market. Added different tags to identify coins on their types.</li><li>This app also provides a watch-list feature where users can save data related to coins and make future decisions</li><li>Users can get the latest news about the crypto market and world events</li></ul>
