MOHIT GUJARATI

Phoenix, AZ • +1 (201)-423-0193 • linkedin.com/in/mohitgujarati/ • https://github.com/MohitGujarati • mohitgujarati11@gmail.com

Full-Stack Software Engineer with 2+ years of professional experience building production web applications using Python, TypeScript, React, Next.js, and Django REST Framework. Skilled in developing REST APIs, responsive user interfaces, SQL/NoSQL databases, and automated testing. Experienced in AWS cloud services, Docker, CI/CD pipelines, production debugging, and delivering scalable, maintainable software across the full stack.

PROFESSIONAL EXPERIENCE

Full-Stack Engineer, Gabriel AI **August 2026 – Present**

- Designed and deployed production features using **React, TypeScript, Django REST Framework, and AWS ElastiCache (Redis/Valkey)**, implementing caller ID routing across 65 numbers, resolving a production data integrity issue, and developing **125 automated pytest tests**
- Migrated a production React application to **Next.js on AWS Amplify**, rebuilding **60+ pages** with reusable, configuration-driven UI templates and optimizing client-side navigation.
- Built automated validation tools for structured data, UI responsiveness, and browser errors; implemented environment-specific ElevenLabs configurations with production fallbacks to improve system reliability.

Software Engineer, TNM Software Solutions **May 2023 - June 2024**

- Reduced device power consumption by 30% fleet-wide by building battery-efficient location services in Kotlin using Google Geofencing API and motion sensors to optimize GPS polling. Improved app performance by 50% and removed UI-thread bottlenecks by refactoring the legacy codebase to MVVM with Kotlin Coroutines for non-blocking I/O.
- Shipped production Android and Web apps from scratch, accelerating release velocity through daily stand-ups and weekly sprints with Backend and QA.

Software Engineer Trainee, Tops Technology Inc. **May 2022 - May 2023**

- Designed optimized Room/SQLite database schemas with normalized relationships, improving query performance and enabling reliable offline-first data sync. Enforced clean separation of concerns across UI, domain, and data layers by structuring MVVM repositories to integrate RESTful APIs via Retrofit, Kotlin Coroutines, and LiveData. Applied mobile app development best practices mainly using Java and Kotlin, and published to the Google Play Store.

SKILLS

- **Programming Languages:** Python, Java, JavaScript, Kotlin, TypeScript, SQL, MySQL.
- **Frontend:** React, Next.js, HTML, CSS, Responsive UI, Material UI, Figma, Google Snitch.
- **Backend & APIs:** Django REST Framework, Express.js, REST APIs, WebSockets, Server-Sent Events
- **Databases:** PostgreSQL, MySQL, SQLite, Supabase, Firebase, Redis/Valkey
- **Cloud & DevOps:** AWS Amplify, AWS ElastiCache, Google Cloud, Docker (Image Building), GitHub Actions, CI/CD, Git, GitHub.
- **Testing and Architecture:** pytest, Unit Testing, MVVM, Clean Architecture, Agile/Scrum**.**
- **Certificates:** Excellence Award in Graduate Computer Science by LIU Brooklyn, Kotlin Professional Certificate by JetBrains.

EDUCATION

- **Master of Science in Computer Science:** Long Island University **| GPA 3.9/4.0 |** Brooklyn, New York **Sep 2024 - May 2026**
- **Bachelor of Technology in Computer Engineering:** Shankersinh Vaghela Institute of Technology | India **Aug 2016- Sep 2020**

PROJECTS

Lummina – AI-Powered Learning Platform • *React 19, Vite, Express.js, Gemini API, Supabase, WebSocket* **March 2026 - May 2026**

- Built a full-stack AI learning platform with REST APIs for streaming chat, quiz generation, AI grading, and study guides. All Gemini and Supabase credentials stay server-side, and responses stream to the client via SSE.
- Engineered a ReAct-based agent orchestrator with multi-step pipelines and structured outputs that automatically regenerates quizzes scoring below 70%, plus real-time voice exams using WebSockets and Gemini Live.

Shop Circle – Social Ecommerce App • *React Native, Expo, TypeScript, Supabase, Algolia, GitHub Actions* **June 2026 - Aug 2026**

- Built a React Native and TypeScript application backed by Supabase/PostgreSQL, implementing authentication, real-time user interactions, multi-image uploads, and ranked content discovery.
- Designed a 6-table relational database with 10 SQL migrations, secured data using Row-Level Security, and configured GitHub Actions workflows for automated mobile builds and distribution.

Recall AI – Intelligent Meeting Assistant • *Kotlin, Compose UI, Coroutines, Flow, Room, MVVM, Hilt, GitHub* **Feb 2026 - May 2026**

- Built a voice-driven AI meeting assistant with Jetpack Compose, MVVM, and Hilt. It streams real-time transcription, contextual Q&A, and automated tasks like alarms and reminders through the Gemini API, Coroutines, and StateFlow.
- Delivered an offline-first experience with a reactive Room persistence layer using normalized schemas and SQL-to-Flow queries. Automated API key injection, testing, linting, and Firebase test builds with GitHub Actions.
