Computer Engineer with 2 years of professional experience delivering production-grade mobile applications using Kotlin. Proficient in MVVM architecture, Jetpack Compose, Room Database, Firebase, and RESTful API integration. Experienced in building AI-powered Android features using Kotlin, Google Gemini API, and Hugging Face Transformers. **Seeking summer internship, full-time roles starting May 2026.**

EDUCATION

Master of Science in Computer Science

Long Island University | **GPA 3.8/4.0**

Sep 2024 - May 2026

Brooklyn, New York

Bachelor of Technology in Engineering

Shankersinh Vaghela Institute of Technology, Gujarat | **GPA 3.1/4.0**

Aug 2016- Sep 2020

Gandhinagar, India

SKILLS

- **Programming Languages:** Kotlin, Java, Python, TypeScript, JavaScript
- **Android Database & Tools:** Jetpack Compose, MVVM, Kotlin Coroutines, Flow (StateFlow/SharedFlow), LiveData, Hilt, Room, SQLite, Retrofit, ViewBinding, Material Design, Google Maps SDK, Geofencing API, Motion Sensors, Speech Recognizer, Firebase (Auth/Firestore/Crashlytics), Supabase, PostgreSQL, REST APIs, Git/GitHub, Google Play Store submission
- **Architecture:** MVVM, Clean Architecture, SOLID, Dependency Injection, Offline-First, Agile/Scrum
- **Certificate -Kotlin Essential Training** (Object-Oriented and Async Code, Collections, and I/O), **Kotlin Multiplatform Development**

PROFESSIONAL EXPERIENCE

Software Engineer, TNM Software Solutions

May 2023 - June 2024

- Engineered battery-efficient location services in Kotlin using Google Geofencing API and Motion Sensors, optimizing GPS polling intervals to reduce device power consumption by 30% across the production fleet.
- Boosted application performance by 50% by refactoring legacy code into MVVM architecture and implementing Kotlin Coroutines for non-blocking I/O, eliminating UI thread jank and improving responsiveness.
- Shipped and contributed from scratch to production-ready android applications by collaborating cross-functionally with Backend and QA teams in daily stand-ups and weekly Agile sprints, accelerating release velocity.

Android Developer Trainee, Tops Technology Inc.

May 2022 – May 2023

- Built and deployed native Android applications in Kotlin using XML layouts, ViewBinding, and Material Design, implementing user-facing features that improved engagement metrics.
- Designed optimized Room/SQLite database schemas with normalized relationships, improving query performance and enabling reliable offline-first data sync.
- Integrated RESTful APIs via Retrofit with Kotlin Coroutines and LiveData, structuring repositories under MVVM to enforce clean separation between UI, domain, and data layers.

PROJECTS

Recall AI – Intelligent Meeting Assistant • Kotlin, Jetpack Compose, Coroutines, Flow, Room, MVVM, Hilt

Feb 2026-Present

- **Architected** a fully declarative UI from scratch using Jetpack Compose and MVVM, with Hilt for scalable dependency injection and ViewModels bridging UI and data layers without tight coupling.
- **Engineered** a real-time streaming pipeline with Kotlin Coroutines and Flow (StateFlow/SharedFlow) integrated with the Gemini API, enabling concurrent live audio transcription, AI-powered chat responses, and a Live AI assistant.
- **Developed** an offline-first persistence layer with Room using normalized schemas and SQL-to-Flow reactive queries, instantly reflecting asynchronous updates across the app.

Fleet Tracker – Real-time Fleet Monitoring • Realm, Geocoder, Geofences, Motion sensor, S.O.L.I.D, GIT

May 2023 - June 2024

- **Developed** real-time fleet location tracking with Google Maps integration and geofencing to trigger location-specific actions, applying SOLID, Kotlin Coroutines, LiveData, and Motion Layout principles to improve maintainability by 40%.
- **Integrated** motion sensors for incident and harsh-driving detection, strengthening the app's driver-safety feature set.
- **Used** Realm Database for secure local storage of safe-zone points, travel history, and user activity, enabling fast retrieval and on-device analytics.

Lummina-Agentive Learning Ecosystem • React 19 • Node.js • Express.js • Gemini API • Supabase • PostgreSQL • March 2026-May 2026

- **AI Agent Architecture & RAG Pipeline:** Engineered a multi-agent system utilizing the Gemini API and a custom ReAct loop, orchestrating a Retrieval-Augmented Generation (RAG) pipeline to dynamically generate interactive quizzes and context-aware tutoring from raw PDF uploads.
- **Secure Multi-Tenant Cloud Infrastructure:** Architected a robust Supabase backend with PostgreSQL, enforcing strict teacher/student data isolation through Row Level Security (RLS) and utilizing an Express server to safely proxy LLM requests and protect credentials.
